HARDWARE

Innovative

WISKA VIEW is setting standards in camera surveillance on ships with its digital, analogue or hybrid CCTV (Closed Circuit Television) technology. The extensive and continuous monitoring of people and materials within safety and security sensitive areas is guaranteed. The integrated alarm management system allows various external Safety & Security devices to be combined with the CCTV system.

Efficient

WISKA VIEW's digital recording technique ensures that images from the closed circuit cameras are automatically saved on a central computer. This allows immediate access to recorded images whilst still recording real-time. The Bus/Ethernet operated system allows you to combine CCTV with WISKA high performance searchlights.

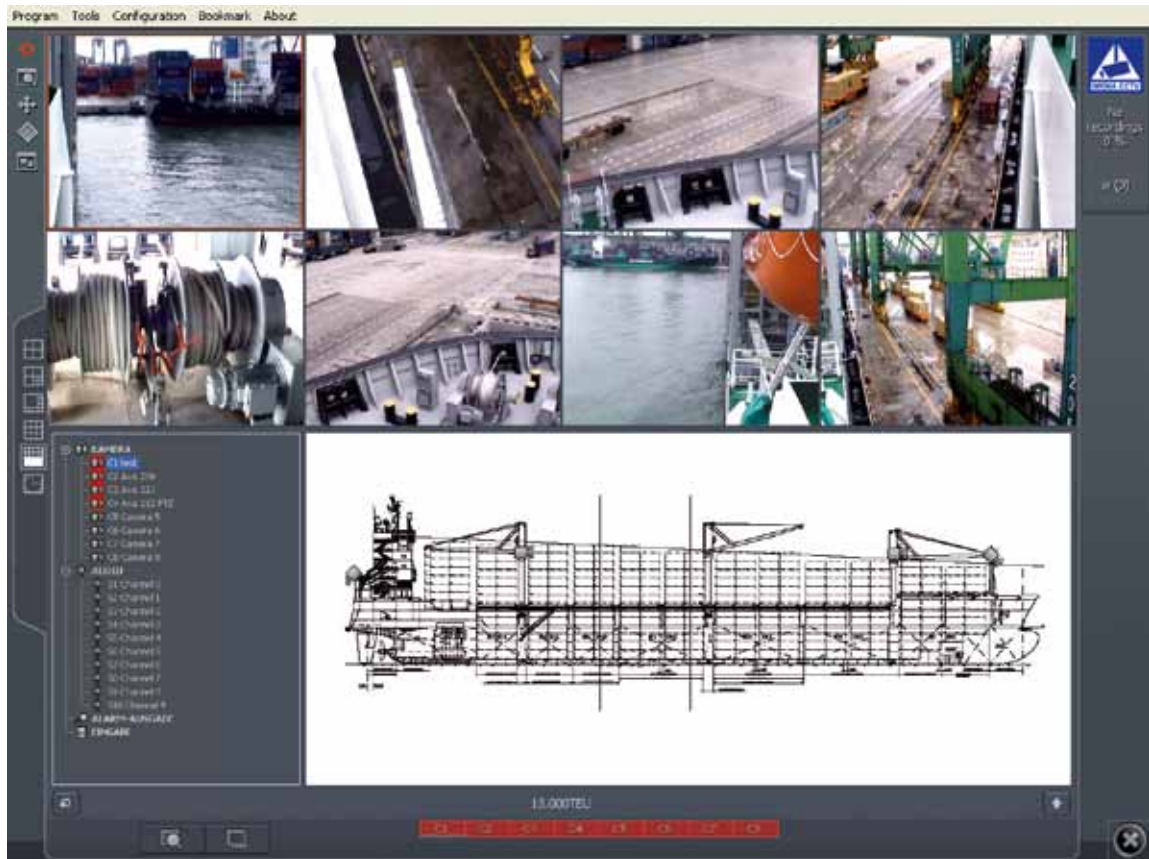

COM4SHIP®
CCTV Server

Software WISKA CCTV VDR Server

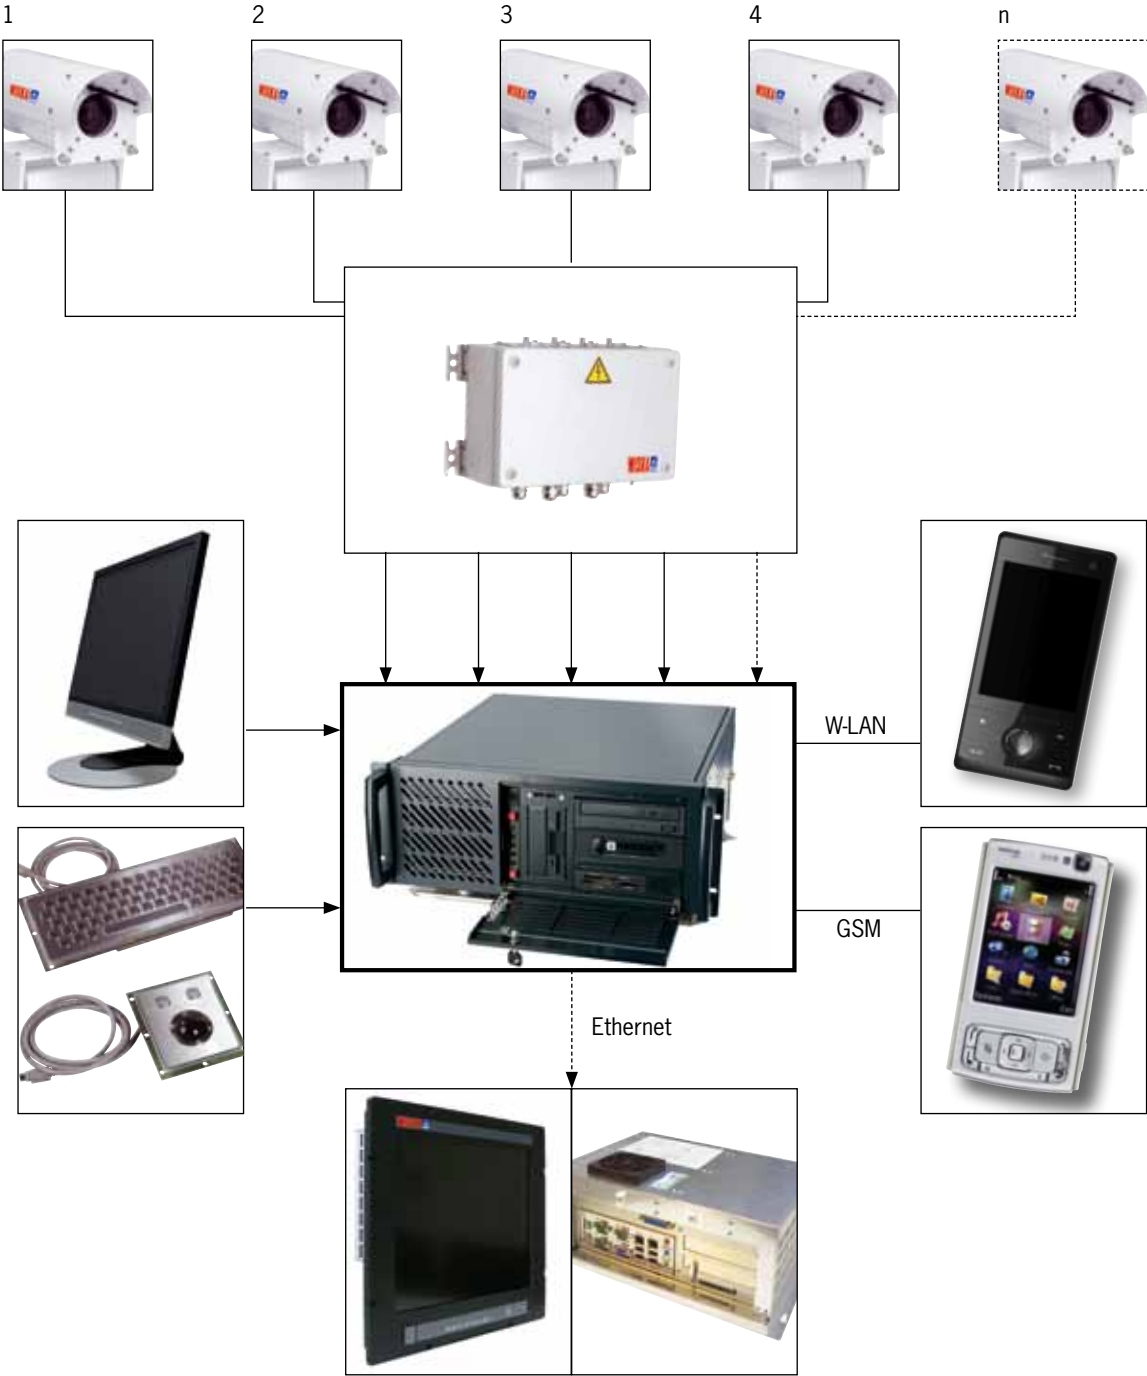

Main features

- Dual use of analogue and IP cameras
- Bus controlled system components (wash/wipe, pan/tilt/zoom)
- Real-time monitoring and recording (with up to 25 frames per second (fps))
- Client and mobile network/W-LAN software
- Motion detection
- E-map function
- Easy to use
- Clearly laid-out
